Hazard, Emergency, and Operations Planning: Collaboration between Planners and Emergency Managers

You are invited to participate in a one-day workshop with emergency managers and planners on improving resiliency to extreme weather and climate events in Arkansas. Working together can enhance emergency operations hazard mitigation planning efforts as well as improve the connection between planning and action.

The workshop will include presentations on historical climate trends and future projections, weather and climate tools, and collaborations between emergency managers and planners. A hands-on hazard planning exercise will be included along with discussion on the roles of FEMA and APA.

The Southern Climate Impacts Planning Program (SCIPP), www.southernclimate.org, is a NOAA funded program aimed to increase resiliency and preparedness for current and future extreme weather and climate events across the south central US.
